

SCANNING COPIER WITH MULTIPLE SELECTABLE PRINTERS

Abstract

A scanning copier includes a housing, a scanning module installed in the housing for scanning a document and generating corresponding image data, a control unit installed in the housing for controlling operations of the scanning copier, and a first printer installed inside the housing. A second printer is externally connected or installed inside the housing. A printer selecting device is electrically connected to the control unit for selecting one of the two printers as an output device. When the scanning module finishes scanning a document, the control unit transmits the image data of the document to the printer selected by the printer selecting device so as to print the document.
